PURCHASES PAL ECOMMERCE APP (05/24 – 07/24)

LIVE LINK : [HTTPS://WWW.PURCHASESPAL.SHOP/](https://www.purchasespal.shop/)

SOURCE CODE : [HTTPS://GITHUB.COM/AMAR1795/PROJECTS-](https://github.com/AMAR1795/PROJECTS-)

-A full Stack E-Commerce App made using the NextJs and utilizing its server actions for seamless and fast data fetching .

-Implemented password reset, email sending using mailgun , deep nested categories for products

-improved the performance of the app in fetching all the products per main categories .

-using next js server side logic to maintain and improve the SEO performance for both website and mobile devices

-implemented features like search ,filtering ,pagination ,adding comments,like and disliking comments ,2step verification ,password reset ,wishlisting ,email notification for order confirmation , 2 step verification and much more

-used best practices like function and data caching on server to improve performance and o auth login for safely logging , typescript for type safety

-UI is all self coded and no library used almost all the components are pure CSS and js

-stripe payment Gateway added along with the built in Wallet to make the payment
